

Building Regulations

To facilitate this ambition of getting the quality right, these checks should take place:

- Have the requirements for Part L2 been understood by the design team and specialist contractors (air permeability, glazing type)?
- Work closely with Building Control and ensure the Building Control Officer's requirements are fully identified at the outset of the project (review and sign off fire damper installation with Building Control).

Our Quality vision:

We will get it right first time on all our projects by delivering exceptional customer service
